## Climate Action & Environmental Management

### **Overview**

Climate management is a global issue that requires businesses to adapt and respond with strategies to achieve a net zero carbon economy. By actively managing our own relatively low exposure to natural capital risks, we play a role among the larger community of businesses to manage climate impacts through our network integration plan, digital services, and connectivity solutions.

CelcomDigi's Sustainability policy affirms our commitment to protecting the environment and contributing to climate change mitigation and adaptation.

### **Our Response**

- Developing carbon reduction roadmap and supportive initiatives in alignment to NetZero 2050 commitments
- Conducting climate risk assessments to guide network integration strategies and target-setting
- Strengthening our sustainability governance and reporting mechanisms while exploring new technologies and solutions
- Setting up a carbon accounting system in compliance with Bursa's requirements for full TCFD-aligned disclosures
- Exploring renewable options, optimisation of resource management and technological advancements

### **What is CelcomDigi's approach to climate mitigation and adaptation strategies?**

For CelcomDigi, climate mitigation and adaptation strategies needs to be inclusive, that couples the social and environmental aspects in a holistic approach towards achieving the Net Zero economy. While we strive to prepare and manage the physical (frequent extreme weather events, flooding, drought, and rising temperatures over time) and transition risks (policy, legal, technology, and market changes) of climate change, we are cognizant of the impacts across our value chain, including operations, supply chain, distribution, communities, and employees. We shall undertake the necessary measures to mature in this journey in an inclusive and equitable manner. Priorities include :

- Capacity building for business partners and suppliers
- Collaborative efforts to develop climate friendly solutions with power providers, technological partners and financial institutions
- Facilitating dialogues with policy makers, industry, regulators and researchers
- Incubating and developing talents to fulfil needs of emerging environmental and ESG-related competencies
- Advocating good environmental practices to our customers
